SPDES NY0025984.pdf

Hi Michelle - As we discussed a couple of weeks ago and in response to Jeff Gratz' letter, attached is our approval letter to Watertown. I am forwarding hard copies of their headworks analysis and the data that they submitted in compliance with the conditions in the letter.

Please note that Watertown has applied to accept additional water from this source. I will be forwarding that application following this email. In discussing this with the permit writer, we are considering including the requirements in the attached letter as permit conditions in their permit rather than continuing approvals on a case by case basis. The conditions would require them to evaluate the proposed discharge with respect to the facility's ability to treat this source of wastewater, submit that evaluation to the Department and the USEPA for approval, and then following approval they may accept the wastewater at the approved rate and submit the results of their monitoring as an attachment to their DMR. let me know if you have any thoughts on this idea following review of the forthcoming info.

Please email me if you have any questions - the hard copies should be going out later today. Thanks!

Brian
